

Aim: Plot histograms for two selected features using matplotlib to visualize their distributions

```
import matplotlib.pyplot as plt

fig, axes = plt.subplots(1, 2, figsize=(12, 5))

axes[0].hist(df['sepal_length'], bins=10, edgecolor='black')
axes[0].set_title('Distribution of Sepal Length')
axes[0].set_xlabel('Sepal Length (cm)')
axes[0].set_ylabel('Frequency')

axes[1].hist(df['sepal_width'], bins=10, edgecolor='black',
color='orange')
axes[1].set_title('Distribution of Sepal Width')
axes[1].set_xlabel('Sepal Width (cm)')
axes[1].set_ylabel('Frequency')

plt.tight_layout()
plt.show()
```
